

What is PPE

PPE is equipment that will protect the user against health or safety risks at work.

When selecting and using PPE:

- Choose products which are CE marked in accordance with the Personal Protective Equipment (Enforcement) Regulations 2018 – suppliers can advise you
- Choose equipment that suits the user – consider the size, fit and weight of the PPE. If the users help choose it, they will be more likely to use it
- If more than one item of PPE is worn at the same time, make sure they can be used together, eg wearing safety glasses may disturb the seal of a respirator, causing air leaks
- Instruct and train people how to use it, eg train people to remove gloves without contaminating their skin. Tell them why it is needed, when to use it and what its limitations are.

Other advice on PPE

Never allow exemptions from wearing PPE for those jobs that 'only take a few minutes'

PPE must be properly looked after and stored when not in use, eg in a dry, clean cupboard. If it is reusable it must be cleaned and kept in good condition.

Think about:

- using the right replacement parts which match the original, eg respirator filters
- keeping replaceable PPE available
- who is responsible for maintenance and how it is to be done
- having a supply of appropriate disposable suits which are useful for dirty jobs where laundry costs are high, eg for visitors who need protective clothing

Employees must make proper use of PPE and report its loss or destruction or any fault in it.

Purifog

A safe system of work must be applied when using our product(s). We do not accept any responsibility for not following a safe systems of work or by using incorrect, faulty, damaged PPE. We cannot endorse any brand or type of PPE but the following should be adhered to.

We recommend that PPE is worn when setting up the machine/ when handling the machine or fluid bags / or when airing a room after Purifog / Biotect.

- Protective eyeglasses/ goggles with side protection that conform to **EN 166 must be used.**
- Always wear work clothes with long sleeves and protective footwear for professional use of category II (ref. Directive **89/686 / CEE and norm EN. ISO 20344.**
- For Respiratory protection use a mask with **filter type A** (against vapour's of organic compounds (Brown)) in accordance with **EN 141**. This can be a half mask used in conjunction with protective eyewear (as described above), or a full mask.
- The right type of respirator filter must be used as each is effective for only a limited range of substances
- Filters have only a limited life.

It is important to wash hands with soap and water after use.
